1 - Discovery Tasks

This table contains a listing of all tasks which were performed as part of this assessment. Items which do not contain a check were not performed.

TASK	DESCRIPTION
✓ Detect Azure Environment	Scan for Azure AD and infrastructure components.
✓ Detect Domain Controllers	Identifies domain controllers and online status.
✓ FSMO Role Analysis	Enumerates FSMO roles at the site.
✓ Enumerate Organization Units and Security Groups	Lists the organizational units and security groups (with members).
✓ User Analysis	Lists the users in AD, status, and last login/use, which helps identify potential security risks.
✓ Detect Local Accounts	Detects local accounts on computer endpoints.
✓ Detect Added or Removed Computers	Lists computers added or removed from the Network since the last assessment.
✓ Detect Local Mail Servers	Detects mail server(s) on the network.
✓ Detect Time Servers	Detects server(s) on the network.
✓ Discover Network Shares	Discovers the network shares by server.
✓ Detect Major Applications	Detects all major apps / versions and counts the number of installations.
✓ Detailed Domain Controller Event Log Analysis	Lists the event log entries from the past 24 hours for the directory service, DNS server and file replication service event logs.
✓ Web Server Discovery and Identification	Lists the web servers and type.
✓ Network Discovery for Non-A/D Devices	Lists the non-Active Directory devices responding to network requests.
✓ Internet Access and Speed Test	Tests Internet access and performance.
✓ Internet Domain Analysis	Queries company domain(s) via a WHOIS lookup.

TASK		DESCRIPTION
✓	Missing Security Updates	Identifies computers missing security updates.
✓	System by System Event Log Analysis	Discovers the five system and app event log errors for servers.

3 - Azure: MYCO

3.1 - Organization

The organization is the highest-level entity in the Microsoft Cloud and represents the owner of the Azure AD environment. Below is a listing of the general contact information of the organization along with the configured technical notification email. Please ensure the information is accurate and up to date to avoid misdirected notices and delays in communication of key account and infrastructure issues.

Display Name	MYCO
Street	100 Appian Way
State	CA
City	Beverly Hills
Postal Code	90210
Country	US

Technical Notifications sent to:

- it@supportOrg.com

3.2 - Domains

The organization can support multiple domains both external and internal. Domains are required to be verified before they can be actively used. Verification can be done through multiple techniques, including special external DNS records. The primary default domain is highlighted in bold. Authentication be managed directly by Azure AD or federated.

DOMAIN	PARENT DOMAIN	AUTHENTICATION TYPE	IS ADMIN MANAGED	IS DEFAULT	IS INITIAL	IS ROOT	IS VERIFIED
myco.com		Managed	Yes	Yes	No	Yes	Yes
myco.onmicrosoft.com		Managed	Yes	No	Yes	Yes	Yes

3.3 - Supported Services

One or more services can be supported by the Azure AD environment per domain. The table below lists all managed domains and the supported services. The most common supported service is Email, which allows the sending and receiving of emails both internally and externally.

DOMAIN	SUPPORTED SERVICES
myco.com	Email;Office Communications Online;Intune
myco.onmicrosoft.com	Email;Office Communications Online

3.4 - On Premise Sync

Some configurations of Azure AD involve on-premise domain controllers where settings from the cloud are synced to and from. If On Premise Sync is enabled, the last time is documented here. If the last sync time is greater than 15 days, it is highlighted in red, possibly indicating syncing issues or a misconfiguration and should be investigated.

PROPERTY	SETTING
On Premise Sync Enabled	Yes
On Premise Sync Last Synced	2023/01/10 4:00:00 PM -05:00

3.5 - Applications

Beyond standard Microsoft services, the Microsoft Cloud and Azure AD can support custom applications. These applications become part of the Azure AD and may have direct access to certain resources that are part of the Microsoft Cloud infrastructure. It is important to periodically review applications to ensure that the minimum necessary are installed and configured properly.

DISPLAY NAME	APP ID	SIGN IN AUDIENCE	IS FALLBACK PUBLIC CLIENT

3.6 - Web URLs

Web URLs can be published by Azure AD for custom applications. Three primary URLs can be specified including a Home Page URL, Redirect URIs, and a Logout URL. These are typically configured by the administrator when installing the application. Periodic audits of Web URLs are highly recommended to avoid misconfiguration due to human error and to ensure malicious applications do not direct users to non-approved sites.

APPLICATION	HOME PAGE URL	REDIRECT URIS
Backup Application bONX		https://usw.dropmyemail.com/en/ms_oauth_callback

Verkada Command	https://vauth.command.verkada.com/saml/sso/*?meta-data=verkadacommand ISV9.2 primary z	

3.7 - Organization Contacts

Organization contacts represent external email addresses that are managed and can be used in the Azure AD environment. These entities exist alongside standard users and groups and are often seen globally. It is important to ensure organization contacts are configured to the proper external email addresses and authorized.

3.8 - Proxy Addresses

The following table lists proxy addresses for various mail accounts. If Azure AD is being synchronized with an external Active Directory, a set of Azure AD settings govern whether the addresses are synchronized or not. Proxy addresses can contain various address entry types including SMTP addresses, X500 addresses, SIP addresses, as well as others.

3.9 - Service Plans

The following table lists the various service plans available the organization and their provisioning status. Plans can be applied to company, group, or user levels as indicated in the table below. Success indicates that the plan was properly provisioned and is available for use with the target entities. Please note that the availability of a plan does not mean the actual use of licenses of the plans.

3.11 - Groups

Groups are used for various purposes in the Microsoft Cloud, including mail distribution groups, security groups, and Microsoft Teams. Groups that have the Mail Enabled property active can be emailed internally and externally depending on the visibility. Traditional Active Directory groups can be mapped to Azure AD groups by looking at the Mail Enabled and Security Enabled settings. Security groups will have Mail Enabled set to

No and Security Enabled set to Yes. Mail Enabled security groups will have Mail Enabled set to Yes and Security Enabled set to Yes. Distribution groups have Mail Enabled set to Yes and Security Enabled set to No.

The list of groups should be reviewed on a periodic basis to ensure settings and visibility are configured properly, as well as to reduce the number of groups to the minimum necessary to avoid security risks.

3.11.2 - On Premise Synced

On Premise Synced Groups Table is unavailable.

3.12 - Users

Users represent the base level accounts in Azure AD. Users are typically associated with people, but may be used for shared accounts, emails accounts, and users required for application access. The management of users to the minimum necessary is crucial to the security of any environment. The user list should be reviewed periodically to ensure that no terminated users or unnecessary accounts are still active in the list of users.

Users shown having MFA Enabled may be different from amounts reported by Microsoft because of differences in calculations.

Last login date based on data collected and synced with Microsoft. Logins within the last 24 hours may not have synced prior to scan.

Premium subscription to Azure Active Directory required to retrieve additional user data including MFA enabled/disabled and Last Login details.

4.9 - Server Aging

This section is an indicator of the age of the active servers based on the date their operating system was installed. The actual age of the server may vary if the operating system was re-installed for any reason. Older systems are highlighted in red and much older systems are bolded. Excludes computers that we were unable to retrieve an OS Install Date.

This section is an indicator of the age of the active workstations based on the date their operating system was installed. The actual age of the workstation may vary if the operating system was re-installed for any reason. Older systems are highlighted in red and much older systems are bolded. Excludes computers that we were unable to retrieve an OS Install Date.

11 - Endpoint Security and Backup

This section contains a listing of detected anti-virus, anti-spyware, firewall, and backup information as detected through  Security Center and/or  Installed Services for major vendors. This list is categorized by domain or workgroup membership.

The 'Name' column contains either the name of the product, **None** indicating the that machine returned information but no product was found, or <empty> indicating that information was not obtainable. Additionally, a status of  indicates 'yes',  indicates 'no', or <empty> indicates that a status was not available.
