

New MSP Opportunity: Compliance Assurance for Cyber Liability Insurance

Meet the growing need for Cyber Insurance policy compliance & reporting

As the **cost of cybercrime rises to \$5 trillion**, companies are protecting their investments with cyber liability insurance.¹ This growing insurance market niche is expected to swell to \$10 billion within a year.²

The Catch

Many cyber liability **claims are being denied** because policyholders can't prove they've met the terms of their policies by making ongoing efforts to minimize threats. To assure payouts, **companies need compliance management and reporting** that meet their cyber insurance policy terms. That's where MSPs come into play.

Assuring Payouts

Depending on the policy limits, cyber liability claims can be quite high. Without a payout from their insurer, companies often struggle to recover from data breaches. Delivering an integrated IT security assurance and compliance program will meet the requirements of any insurance provider, and boost your recurring revenue.

Meet Compliance Manager GRC

Compliance Manager GRC allows you to track compliance with the IT terms of any insurance policy at the same time you manage compliance with your other IT requirements...from ANY source. With it you can:

- Identify all insurer security policy terms
- Establish network IT security configurations that are compliant with policy terms
- Run regular compliance audits
- Address compliance issues as they arise
- Automatically document everything
- Bind primary or secondary cyber insurance policies

Compliance Manager GRC goes way beyond just cyber risk policy management. The platform allows you to assess, remediate, and provide evidence of compliance with all your IT requirements...regardless of source.
